

Eco-Keeper BED BUG MONITOR GLUE TRAP

"SLEEP EASY WITH Eco-Keeper™" 2 IN 1 BED BUGS MONITOR & GLUE TRAPS

Installation

When installing the Eco-Keeper™ Bed Bug Monitor and Glue Trap, simply place the traps under each leg of the furniture where people would reside (beds, couches, etc.). Be sure to position the leg within the center of the trap. The trap was purposely

constructed with an inner circle base for convenience and easy placement. Keep in mind, the inner circle can fit a leg with a maximum diameter of 4.33 inches (11 cm). Placing the traps under furniture legs with larger diameters will cover the glue adhesive and hinder the traps optimal performance.

Eco Keeper™ Bed Bug Monitor and Glue Traps

Product Detail

Early detection of bed bugs is a crucial step when trying to manage and control your infestation. Bed bugs are known to crawl up wood, fabric and other surfaces to get to their meal. Due to their size and nocturnal behavior, bed bugs are very difficult to spot and treat. If their movements are subtle and hardly noticeable, how can you ever manage your bed bug problem?

SIMPLE!

The Eco-Keeper™ Bed Bug Monitor and Glue Traps were created to perform an "interception" of bed bugs during their entrance and exit movements. The adhesive ring on the trap serves as a guard for your furniture and a trapper for bed bugs. In addition, the trap lures bed bugs in using its attractive open cracks and crevices on each side of the trap.

Keep in mind:

-DO NOT touch the adhesive.

-Place in dust free and debris free areas.

-Targeted furniture should not be in contact with walls.

-Remove any reachable and climbable objects (including bed sheets, pillows, clothes, etc.) from the floor that is in contact with the targeted furniture.

Inspection / Detection:

It is recommended to check and inspect the Eco-Keeper™ Bed Bug Monitor and Glue Traps on a daily basis. When the trap is at full capacity or when the glue is not visible, you can then remove the traps from the floor. Depending on your bed bug infestation size, you have the option to replace the used trap with another. Place the used traps into a plastic bag for disposal. Be sure to double check the plastic bag for tears and holes. Seal the bag shut and throw it away
