

weatherblok[®]XT RODENTICIDE

multiplex[™] station

The Best of Both Worlds.

When baiting for rodents, it's important to use the best products available. This includes using bait with superior palatability and weatherability, and the ideal station designed to attract rodents inside.

Weatherblok[®] XT is formulated to exceed the competition in both weatherability and palatability. The food-quality grain base gives it superior palatability, while not compromising its resilience in all types of weather. Recent tests have shown that Weatherblok XT is greatly preferred by rodents over other block baits, sometimes as much as 2 to 1.

LOW DOSE, EFFECTIVE CONTROL

The active ingredient brodifacoum, a single-feed anticoagulant, allows Weatherblok XT to attain rodent control in extremely low doses. A rat need only eat 6 percent of the block to achieve control, and for mice it's a mere 1 percent. Brodifacoum even has the efficacy to be labeled for use against warfarin-resistant mice and rats, making it the only anticoagulant of its kind.

Weatherblok XT's unique shape features many gnawing edges, enticing rodents to consume a lethal dose. Weatherblok's shape also maximizes quantity of placement and allows for high-density baiting. On a bait station rod, you can place up to 100 percent more Weatherbloks than competitive blocks.

As its name suggests, Weatherblok XT is known for its outstanding resistance to the elements. Weatherblok XT survives moisture better than other rodenticide block

products. It maintains its shape and color, even after being immersed in water for 24 hours or longer. In similar tests, competitive products break apart or stain their surroundings with water-soluble dyes.

This superior formulation was one of the first rodenticides to pass the EPA's weatherability test and is also labeled for use in drains and sewers.

MULTIPLEX™ STATION - SUPERIOR DESIGN FOR ULTIMATE CONTROL

The Multiplex Station is designed to keep Weatherblok and other rodent baits as fresh as possible. Unlike other designs, the Multiplex has no raised lip impeding the entrance. This prevents standing water that can mold bait and diminish palatability. The absence of an entrance lip also makes the Multiplex more inviting to even the wariest rodents. The color and double-walled construction of the Multiplex make it the coolest station of its type in direct sunlight, so there is less chance of melted bait.

The Multiplex Station is built to hold up to a pound of Weatherblok for high-density baiting – the perfect combination for severe infestations. Despite having the largest bait capacity available, the Multiplex Station's design offers ample interior space, while competitors' stations hold less bait and are less welcoming.

The Multiplex Station has the lowest profile to aid in placement, and testing has shown that it is easier to service than comparable bait stations. A special 2-pronged key pushes into the latch in a single movement, and the latch pops up for ease in opening. The replaceable lid stays up without holding to allow 2-handed servicing of the interior. Square angles within the Multiplex simplify servicing, and bait trays are

removable for cleaning. Time trials indicate that out of five top competitive stations, technicians were able to service the Multiplex quickest, in some cases completing the process in about half the time of others.

The Multiplex Station is also designed for pest control flexibility. If the problem is primarily mice, a rat-excluder door can be installed to keep rats out of mouse bait and mousetraps on one side of the station, or used to keep larger rodents like squirrels out of the station entirely. Many insects that may feed on rodent bait can be controlled in separate areas of the station, in which liquid ant bait, roach bait, fly lures or even glue traps can be installed.

SAFETY

Both products are also designed to reduce hazards to your customers. Weatherblok contains Bitrex®, a human taste deterrent, and uses the readily available antidote vitamin K₁ for the treatment of accidental ingestion. The Multiplex Station is constructed of a durable, tamper-resistant poly-plastic with a reinforced and robust tab on which a zip tie can be used for additional resistance to disturbance. The improved lid creates a positive lock, further increasing resistance to non-target entry.

Weatherblok XT Features:

- Low-dose, single-feed anticoagulant
- Effective on warfarin-resistant rats and mice
- Use in and around both urban and rural structures
- Optimal blend of weatherability and palatability
- Extruded profile with gnawing edges
- Bitrex® human taste deterrent

Multiplex Station Features:

- Ability to hold up to 16 oz of Weatherblok XT
- Design that keeps bait cool and dry
- Strong, double-wall construction for durability
- Greater flexibility – monitor and control multiple pests simultaneously
- Tamper-resistant design to prevent contamination and accidental exposure
- Unique lid and catch that cut down on servicing time

As a pair, Weatherblok XT and the Multiplex Station continually outperform the competition. Weatherblok XT is a highly palatable and effective rodenticide. The Multiplex Station keeps Weatherblok XT fresher and working longer than other bait stations, so there's less wasted bait and fewer callbacks.
