

New York Cockroach Control Kit - Basic

Kit Includes:

- (1) Fenvastar EcoCap
- (1) Maxforce Roach Gel - 30 gram
- (1) Gentrol IGR Concentrate - 1 oz bottle

Note: A hand pump sprayer is required to use these products. (Not included)

Thank you for purchasing the Cockroach Control Kit - Basic. This kit is designed to aid in the control of most species of cockroaches in homes and small businesses. This kit is not designed to provide control of cockroaches in restaurants or commercial food establishments.

Before applying any pesticides please refer to the label directions for the proper use as well as precautionary measures that should be taken before you use or apply these materials.

General Suggestions For Use:

Cockroaches hide in cracks and crevices. They do not routinely crawl across baseboards or open walls unless the infestation is severe. In most cases, treatment of kitchen and bathroom cabinets, sink cabinets, plumbing voids (inside walls under sinks), around (not inside) kitchen appliances such as dishwashers, refrigerators, stoves, and built in microwaves, is extremely important. Treatment of pantry and food storage areas and other places where food is stored is also extremely important. It is also important that no food crumbs, trash, open food, open water or other food sources be available to cockroaches at any time. This includes open pet food, bird food, watering bowls, etc. Sanitation is the first step to cockroach control. Use a vacuum cleaner, shop vac, etc, and remove as much food debris and crumbs as possible and cover any open food. Empty kitchen sink at night and wipe dry.

Gentrol IGR Concentrate - Gentrol IGR (Insect Growth Regulator) is a juvenile growth hormone that disrupts the cockroaches molting patterns and can cause sterilization of roaches resulting in a “knockdown” of severe to extreme infestations. Infestations that are minor or where only a few cockroaches are found will show minimal effects of an IGR. The IGR concentrate is added to the insecticide to be sprayed at a rate of 1 oz (1 bottle) per gallon. The effects of IGR's take 3-4 months to be seen. Cockroaches that appear to have “twisted” wings are usually seen. No other effects are visible. IGR's are 80-90% effective and will not give 100% control of cockroach infestations, but are used as a tool to control large infestations.

Fenvastar EcoCap - One gallon of solution for an average house applied at the low rate of 0.025% (1 oz per gallon of water) is all that is usually required. Apply by use of a small hand sprayer to cracks and crevices of empty cabinets, cupboards, pantry shelves, etc. Do not spray the entire shelf, only the cracks and crevices. Also spray baseboards, behind furniture, closets, etc. To help control other pests, spray the outer perimeter of garages, around outside doors, windows, foundations, eaves, weepholes, vents, pipes, etc. Let dry thoroughly and replace cabinet linings before replacing food or utensils.

Maxforce Roach Gel - Apply roach gel bait inside kitchen and bathroom cabinets and any place cockroaches are seen. A small bait “dot” about the size of a pencil eraser in the corners of cabinets or every 12” gives the best results. A typical kitchen will require many “bait dot” placements, bathrooms require much less. Do not overspray with gel bait with insecticide or apply anywhere bait can become contaminated with household cleaners, etc. Only apply bait in areas where these products are not used. Do not contaminate the bait.

Bug Traps & Monitors - Place 1 monitor under each sink, and beside refrigerator, washing machine and dryer. Inspect these stations frequently to determine roach populations. Lots of small roaches indicate breeding and reproduction and lots of adult roaches indicate a large population and no roaches indicate success!

Control is not immediate. Be patient and allow the products to work. Repeat application in 2-3 weeks or as needed. This kit contains enough products to treat the average 2,000 sq ft home 2 - 3 times. Most pesticides are short lived and require regular applications on a monthly or quarterly basis to maintain their effectiveness. Elimination of roaches that may be living inside walls or other untreatable areas and obtaining 100% elimination may not be possible without a professional analysis and treatment
